

Clear Bond

Art.: 01.0635.6100

Bottle 10 g

Clear Bond is an absolutely clear instant glue for quick repairing and gluing of almost all types of modern plastic, rubber, wood and also metals. Due to its unique thixotropic character, the product can be applied very precisely, even on vertical surfaces. After application, Clear Bond is extremely transparent.

Used in combination with Innotec Acti-Prim, this cyanoacrylate adhesive based on modern technology can be applied to an extremely broad range of substrates, including even polyethylene and polypropylene. The curing of Clear Bond can be accelerated by using Innotec [Acti-Prim](#) or also [Quick Bond Activator](#).

In the Automotive and Industry sectors, plastic supports, hooks, clips, bolts, and so on break off on a regular basis. Use Clear Bond to make a perfect repair. If the bond is to be placed under heavy load and the unique transparent nature of Clear Bond is less important, it is possible to reinforce the bond with [Topfix](#) or [Repaplast Repair](#) and use Clear Bond as a fixer.

As the combination of Clear Bond and Acti-Prim is perfectly transparent, no fracture line is visible. This means that the product is ideal for gluing plastic rear lights, indicators, flashing lights, PMMA panels, displays, etc.

Packaged in a handy 10 g bottle with metering cap, Clear Bond is easy to use and can be dosed accurately.

- Perfectly transparent.
- Excellent adhesion to difficult surfaces.
- Thixotropic (reactive gel > shake before use)?
- Curing at room temperature or accelerated curing after activation.
- Easy to use.
