

Contact Clean

Art.: 04.0162.9999

Aerosol can 500 ml

Contact Clean is a very effective cleaner for electrical and electrical parts. Thanks to the long action time, it easily removes just about every kind of dirt, grease and corrosion, thereby creating a perfect electrical connection.

Contact Clean is indispensable upon repairing and checking electronic and electrical circuits in vehicles, machines, sound equipment, computers, etc. since many of these electronic connections are in places which are highly exposed to the action of the weather and the effects of grease, dirt and salt. Contact Clean removes oxidation, dirt and grease, thereby guaranteeing good conductivity.

Due to its unique, well-balanced composition the product does not evaporate too quickly and has a low surface tension. In contrast to many other products this allows it to penetrate deeply into the surface and to work for a long time.

Contact Clean evaporates completely and leaves no residues.

After cleaning, use [Multi Spray 1000](#) to provide the contacts with a protective, moisture-repellent layer.

In its aerosol packaging, Contact Clean is very user-friendly and easy to use. Thanks to the special unbreakable nozzle and tube, even hard-to-reach places can be treated very well and the spray can can be used in all positions. On this nozzle can be fixed a special brush ([Aerosol Brush](#)) to work even more locally and more intensively.

- Good cleaning effect.
- Specially developed for electrical connections and electronics.
- Low surface tension, therefore a good penetrating effect.
- Evaporates without leaving residues.
