

PRODUCT INFO

Diesel Plus

Art.: 04.0167.9999

Bottle 250 ml

Diesel Plus is a highly effective additive to prevent problems in the entire fuel system of diesel engines. The product optimises combustion, among other things, which results in less soot emissions, pollution and wear.

Diesel Plus contains highly active substances ensuring that by encapsulating (condensation) water in the diesel tank no algae form, that the active cleaning of the injectors makes the diesel engine perform better under all circumstances, and that the cold start is significantly improved. This means that less soot emissions are emitted during the engine's warm-up phase.

The product also ensures that the quality of the diesel fuel remains optimal for a longer period of time. The use of Diesel Plus leads to better combustion, which ensures a higher efficiency of the burned diesel.

Thanks to its unique composition, the product does not require any warning symbols.

The handy swan-neck bottle makes Diesel Plus very easy to add to the fuel system. The concentrated 250 ml content is sufficient for a full clean.

- Easy to use without disassembly.
- Cleans the entire fuel system.
- Powerful cleaning.
- Improves combustion of all diesel types.
- Optimises fuel consumption.
- Dissolves carbon and soot deposits.
- Compatible with biodiesel.
