

## PRODUCT INFO

### Dry Lube

Art.: 03.0123.6100

Aerosol can 500 ml

Dry Lube is a fast drying and silicone free lubricant that leaves a high-quality lubricating and sliding film on the treated surface. Thanks to its unique composition, this product provides a dry and almost invisible antistatic layer, thus greatly reducing stick & slip resistance.

This dry-film lubricant is a dispersion of colourless, waxy polytetrafluoroethylene (PTFE) that, after evaporation of the solvents, leaves an almost invisible and completely dry layer of sliding lacquer.

Dry Lube can be applied to the most frequent surfaces such as ferrous and non-ferrous metals, wood, plastics, textiles, etc. This multi-purpose product is perfectly suitable for conveyer belts, dashboards, slides, machine parts etc. Moreover it is ideal to lubricate places where the attraction of dust and dirt is to be avoided in order to prevent malfunctions or accelerated wear.

Dry Lube is not sticky and does not stain, therefore it is also suitable to lubricate critical areas such as micro bearings in electronics, all hinges in car interiors or dovetail joints in fine mechanics.

- Silicone free and antistatic.
- Transparent, dry lubrication.
- Extremely low coefficient of friction.
- Reduces stick & slip resistance.
- Corrosion resistant, waterproof.
- Temperature resistance from -60°C to +280°C.
- Anti-adhesive.
- NSF registered (class H2), register number 144035.
