

Easy Fit Connectors Blue 25 pieces

Art.: 80.0400.6130

25 pieces

Easy Fit Connectors are the clever way to make professional cable connections and consist of a special plastic covering over a tin soldering core. Using an industrial blower-drier both can be melted easily, in one go, around the cables. The tin soldering provides a perfect metallic conductive connection, which, thanks to the shrunken plastic cover, also provides optimal strain relief.

This means the Easy Fit Connector is the ideal product for the fast and effective connecting, splitting or joining of electrical cabling in a safe and durable manner. Easy Fit Connectors can take up to 2000 volts.

Easy Fit Connectors are an excellent help for building electrical components into trucks, cars, boats, motor bikes, switch boxes, etc. Many of these components are fitted as an afterthought. Except for the interior, many of the wires for these components are found on the outside, where they are exposed to all kinds of mechanical influences and the effects of dampness, dirt and salt. Easy Fit Connectors are the professional means of connecting and optimally protecting these wires against the influences above, to prevent faults or, more seriously, short circuits from occurring.

Connections on the outside, subject to sustained dampness and wear, should be wound with [Self-Sealing Tape](#).

Easy Fit Connectors come in four sizes:

0,4 - 1,7 mm : Transparent

1,3 - 2,7 mm : Red

1,8 - 4,5 mm : Blue

2,8 - 6,0 mm : Yellow

They are packaged in 25, 50 and 100 unit resealable packs.

- High-quality shrink sleeve with tin soldering core.
- Connector, insulator and strain relief in one.
- Safe and durable.
- Very simple to use.
- Can take up to 2000 volts.
- Excellent resistance to mechanical loading.
