

Fuel System Cleaner

Art.: 04.0148.9999

Aerosol can 500 ml

Fuel System Cleaner is an excellent cleaner for parts of the fuel system. It efficiently removes contaminations such as carbon and grease deposits, resin, gum, oxidation, etc. on parts such as valves, actuators, EGR-valves, injectors, idle stepper motor, throttle valves, air mass meters, etc.

Thanks to its unique composition, Fuel System Cleaner is perfectly suited for cleaning almost all modern fuel systems of vehicles such as cars, motorbikes, trucks, mopeds, tractors, etc. It can also be applied safely for fuel systems that are provided with a catalyst. The product can also be used for machines such as mowing machines, generators, chain saws, etc.

Due to its composition, Fuel System Cleaner is also suitable for the thorough cleaning of the outside parts of the fuel system, even if they are made of plastic.

Of course, Fuel System Cleaner can also be applied for older systems such as carburetors, mechanical injection systems, etc. After cleaning, the motor will run better, more regularly and economically, as all individual parts of the fuel system work optimally.

The aerosol packaging makes Fuel System Cleaner very user-friendly and easy to apply. Due to the special unbreakable nozzle with small tube, the product is easy to apply in the least accessible parts of the fuel system. The nozzle also allows use of the spray can in all positions.

- Effective cleaner for parts of the fuel system.
- Great cleaning quality.
- Removes carbon and grease deposits, resin, gum, oxidation, etc.
- Suitable for modern fuel systems.
- Suitable for use in fuel systems with catalyst.
- Wide range of applications; also suitable for older systems with carburettor.
- Easy application.
