Hydro Guard 5 l

Art.: 80.0305.6100

5 l

Hydro Guard is a very high-quality impregnation product providing colourless, breathable and water-repellent protection for façades and sloping roofs.

Hydro Guard reduces the penetration of moisture. The product prevents the occurrence of moisture stains, mould, wet walls, salt and calcium deposits, eruptions, frost damage, moss growth and dirt. These positive properties are achieved without sealing the wall, Hydro Guard ensures that the surface can breathe because the product allows the damp to pass through.

Hydro Guard has a wide range of application on most common vertical surfaces. The product offers excellent adhesion to all porous stones and upholsteries such as bricks, limestone and sandstone, cellular concrete, concrete stones, joint mortar, fibre cement and stucco (it is recommended to test first on the surface). Make sure not to apply Hydro Guard on wood, marble, slate and bluestone!

Hydro Guard has a very high solid content and is also perfectly UV resistant. Due to these properties the product works for a minimum of 10 years.

- Protects stone and concrete against mould, moss, frost, etc.
- Water vapour permeable, UV resistant.
- Expected duration of protection: 10 years.
- High permeating power.
- Chemical bond to surface.
- Completely transparent, does not colour.
- High insulating power.
