

Multiflex Coating HS Plus White (UV Plus)

Art.: 02.1430.0100

Screw-top can 1 l

Multiflex Coating HS UV Plus is a highly flexible, UV-resistant and colour-fast stone chip protector with excellent anti-corrosion and sound deadening qualities. Because of its ease of use and its perfectly bright white colour, the original structure can be perfectly imitated. The UV-blocker contained in the product makes painting over unnecessary.

Multiflex Coating HS UV Plus is isocyanate-free and retains its flexibility at all times. The product offers perfect adhesion to bare metal and primed metal. It is extremely fast drying and after full curing it can be sprayed over with just about any type of modern paint system, if desired.

Multiflex Coating HS UV Plus can be used for repairs to vehicles and to restore the factory original coating. On vehicles these coatings are applied to the sills, wheel arches, and other bodywork parts.

Another important property of the product is that it is resistant to solvents when fully cured.

The economical 1 litre packaging makes Multiflex Coating HS UV Plus perfect for spraying with the [Pressure Pot Gun](#) or [Pressure Gun Basic](#). The wide range of settings available on these guns allows you to spray layers of any thickness and to copy lots of different structures.

- Colour-fast, perfectly white stone chip protector.
- Ideal to imitate OEM structures.
- Free of isocyanates.
- Easy to apply.
- Perfect adhesion to bare metal and primed metal.
- Contains a UV-blocker which makes painting over unnecessary.
- Can be painted over after full curing with almost any modern paint system, if desired.
- Perfectly sandable when dry.
- Resistant to solvents when fully cured.
- Remains flexible and does not age.
- Extremely long storage life.
- Extremely high solid content, so perfectly suited for applications where a large layer thickness is desired.
