

Repaplast Structure Coat NF

Art.: 02.1139.6000

Aerosol can 500 ml

Repaplast Structure Coat NF is a very high-quality structure primer with unique properties, developed based on the most modern techniques. Thanks to the addition of special rheological ingredients, it is possible to easily restore the most common structured plastics to their original OEM structure.

Plastics are used on a large scale in the most modern vehicles. So not only bumpers are made of unlacquered, textured plastic, but so are mirrors, mudguards, fenders and certain interior parts. This plastic offers lots of positives: it is lightweight, relatively inexpensive and easy to shape and process. But it does have its negatives too. Textured plastic parts are also very vulnerable to damage such as scratches and scrapes. With Repaplast Structure Coat NF all of this minor damage can be perfectly repaired with a minimum of effort, and damaged structured parts can be made to look like new.

Repaplast Structure Coat NF comes with 2 nozzles allowing you to easily imitate the most common structures, from rough (red nozzle) to very fine (white nozzle). In addition, you can also influence the structure by simply varying the spraying distance.

For optimal and lasting results, always finish the repair with [Repaplast Colour Finish Better Care](#) – this will also allow you to approach the original colour.

Use Innotec [Masking Tape](#) and Innotec [Masking Paper Dispenser](#) to protect the surrounding parts when spraying.
