

Topweld NF

Art.: 80.0109.9999

Aerosol can 500 ml

Topweld NF is a high grade, non-flammable welding spray that keeps welding spatter from sticking to the welding nozzle and work piece. It prevents the metal particles from burning into the surface, ensures a smooth wire feeding thanks to its lubricating properties and thus contributes significantly to an optimum welding result.

Thanks to its unique composition, Topweld NF significantly reduces the amount of spatter as well as the volume of unpleasant fume generated during welding. Using Topweld NF ensures that you do not need to remove any welding spatter from the parts after welding. Moreover, the product has an extremely positive influence on the surface quality of the weld.

If Topweld NF is also applied in the welding nozzle, the welding wire will pass through more easily. This will extend the life of the nozzle and allow to save money on expensive equipment.

In the aerosol packaging Topweld NF is very user-friendly, economical and easy to apply.

- Completely non-flammable, free of flammable solvents en gases.
- Based on temperature stable natural oils.
- Silicone-free.
- Anticorrosive.
- Universally applicable in all welding processes, such as MIG/MAG, TIG, autogenous & electrode welding.
- Easy to apply, perfect distribution of the product thanks to the optimum valve/nozzle combination.
- Increases the stability of the arc.
- Protects workpiece and welding nozzle against welding spatter burning into the surface.
