

Unifix 300 S White 2-Component Mixture

Art.: 07.1450.0100

Twin cartridge 50 ml

Unifix 300 S is a fast drying and slightly expanding 2-component injection material that can be used for the most various installation jobs in the construction and maintenance sector (e.g. worn out drill holes), but also in automotive, mobility, industry and marine. Thanks to the quick and excellent adhesion of this product, repair and mounting work can be performed a lot quicker.

Unifix 300 S is a perfect problem solver in the field of mounting techniques. It provides a quick and professional solution for problems occurring when fixing into modular walls, hollow bricks, holes that have been drilled wrong or too large as well as broken out holes.

Because of its optimum mixing ratio and heat development the 2-component PU injection polymer will perfectly foam in the drill hole thus providing a mechanical and chemical adhesion to the substrate.

For the construction and maintenance sector, it guarantees a solid adhesion to almost any building material which is currently used in the construction industry. In building materials like plasterboards, insulating boards, hollow high-speed building bricks, natural stone, concrete, sand-lime bricks and ceramic & cellular concrete blocks where traditional universal fixing materials give unsatisfactory results with regard to adhesion and fixing, Unifix 300 S creates a perfect fixing, often even without rough-drilling (depending on the method of working/fixing). In hollow walls or stones the universal perforated sleeve can be used so that a perfect fixing can be guaranteed there too.

Unifix 300 S is very economical and easy to use thanks to the handy 50 ml dual cartridge and the use of the [Mixer Gun](#). By using this ergonomic gun the product can be dosed very easily and accurately. This enables to achieve a perfect result whenever and wherever. The special mixer nozzle ensures the right mixture proportions and prevents the remaining product from hardening in the cartridge. This means that an opened cartridge of Unifix 300 S can still be kept for a long time.

- Good adhesion to all building materials and various other substrates.
- Good fixation thanks to the perfect and stable foaming.
- Accurate dosing thanks to the use of mesh sleeves in hollow materials.
- Pressureless anchoring, so no damage to tiles or plaster.
- For inside and outside applications on almost all (even damp) surfaces.
- Contains no solvents or harmful plasticizers.
- Good shelf life and stability in the 2-component cartridge.
- Perfectly sandable and paintable.
- Good water and UV resistance.
- Temperature resistance from -20°C to +90°C.
