

PRODUCT INFO

Unisol

Art.: 04.0112.6100
Aerosol can 500 ml

Unisol is a multifunctional, solvent based, deep-acting cleaner for technical industrial applications, including the food processing industry. The product is specially designed to effectively remove caked oil, grease, wax products, resin, glue, ink residue and thickened paint materials, both water and solvent based.

Unisol is perfect for cleaning many different mechanical metal parts. Its unique solvents are composed in such a way that they can penetrate strongly, quickly and deeply into the dirt, which then can be removed optimally and quickly. The product dissolves the contamination and evaporates rapidly, so that production problems caused by dirt or grease can be quickly fixed, and this usually without interrupting the work process. Perfect to use in places where watery cleaners can cause oxidation, rust and electronic disturbances.

- Quick and deep penetrating solvent cleaner with a controlled evaporation rate.
- Effective for removing oil, grease and wax residues.
- Removes both water and solvent based products and evaporates without leaving any residue.
- Can be used in all positions and is provided with a special antishock nozzle.
- NSF registered (class K1), suited for use in food processing companies.
- May seriously affect lacquer and plastic substrates (first test on a non-visible area).
