

PRODUCT INFO

Versabond 310 ml Black

Art.: 01.2416.0000

310 ml

Versabond is a unique construction adhesive with lasting elasticity based on the latest SPUR polymer techniques. The product is very suitable for bonding and sealing nearly all surfaces in the automotive and construction sector such as metal, aluminium, concrete, stone, wood, construction foil, PVC, EPDM, rubber, pond liner, ferrous and non-ferrous metals.

Versabond is extremely flexible and water-resistant. This makes the product suitable for applications where water and moisture have free play such as roofs and lakes. After drying, Versabond transforms into a tough, self-adhesive product. Its temperature range of -35°C to $+90^{\circ}\text{C}$ allows the product to guarantee a perfect adhesion, even under cold conditions.

Versabond contains no solvents, as a result of which it is not subject to shrinkage or cracks. Neither does the product contain silicones or isocyanates. After applying, Versabond can be left open for a long time without having a negative effect on the adhesion; on the contrary, it will even increase the initial adhesion.

- Retains its elasticity.
- Perfect adhesion to nearly all surfaces.
- High flexibility.
- Good water resistance.
- Temperature range of -35°C to $+90^{\circ}\text{C}$.
- Free of solvents, isocyanates and silicones.
- Long open time.
