

Multi Gasket 300

Art.: 01.1418.0775

Cartridge 310 ml

Multi Gasket 300 is a very high-grade and easy-to-apply gasket maker having a temperature range of -60°C to +260°C with a peak load up to 300°C.

Multi Gasket 300 can be applied as a replacement or support for all kinds of standard gaskets such as gearboxes, drive shafts, crankshafts, sump or dynamo covers, ignition or clutch.

The big advantage is that there is no need to keep a large quantity of standard gaskets in stock and that a perfectly fitting gasket can be made in the event that a standard rubber, cardboard or cork gasket is missing such as for a foreign brand or if the delivery time is too long.

Multi Gasket 300 can also be used along with the standard gasket to optimally seal damaged or distorted surfaces.

Due to its high temperature resistance the product can also be used in applications exposed to higher temperatures.

Multi Gasket 300 has a very typical original OEM red colour, which makes its highly recognisable. The product is to a large extent resistant to many chemicals, oils, greases and salts. Despite the good adhesion the sealed components can be easily disassembled and the gasket is relatively easy to remove.

The handy 310 ml cartridges make Multi Gasket 300 very economical and easy to use.

To remove Multi Gasket 300 use Innotec [Paint Stripper Spray](#) or Innotec [Gasket Remover](#).

- High-grade product for seals of all kinds.
- Perfect adhesion to plastics, glass, metal, aluminium, etc.
- Fast drying, skinning in 30 minutes.
- High temperature resistance with a peak load up to 300°C.
- Resistant to many chemicals, oils, greases and salts.
- Complies with DIN 18545, class E.
