

PRODUCT INFO

Calcium Clean 1 l

Art.: 04.0300.6100

1 l

Calcium Clean is a unique and very powerful cleaner that removes calcium and surface rust in a very effective manner. Due to its unique composition, the product is extremely well suited to the cleaning of sanitary rooms (baths, showers, chrome or stainless-steel taps, washbasins, toilets, swimming pools), car washes and wash boxes.

Calcium Clean is also safe for kitchens, kitchen working tops and tiling. Due to its composition, Calcium Clean will not affect the most common metal surfaces. This means that it can be used without problem on these frequently vulnerable materials. Calcium Clean can be used in the food industry, if applied according to the HACCP-norms in force.

Calcium Clean forms a foam when applied, the advantage being that this gives it an optimum effect on vertical parts so that the product is ideal for decalcifying chromed or stainless steel taps, washbasins, stainless steel equipment and tools. The product leaves a pleasant odour behind after use.

Calcium Clean is ready to use and does not require further dilution. Due to the included and specially developed foam trigger, it creates a stable foam, as a result of which it has a long period of action on rust and calcium deposits. Also available in an economical 5 litre and 10 litre can.

- Removes calcium deposits in an extremely simple and effective manner.
- After application the product forms a foam, thereby ensuring optimal working, even on vertical parts.
- Does not affect metals.
- Pleasant odour.
