

## PRODUCT INFO

# Engine Oil Plus

Art.: 04.0183.9999

Tin bottle 300 ml

Engine Oil Plus is an oil additive that stops and prevents oil consumption and leakage along seals, thus extending the life of the engine.

This unique additive is intended to be used after applying Oil Flow Renovator or any other engine flush. It ensures that the sealing rings, such as the front and rear crankshaft seal, valve seals, etc., become elastic again after being exposed to aged engine oil, and again provide an optimal seal. In addition, Engine Oil Plus leaves a sliding coating of nanoparticles in the oil system, making moving parts function better and make less noise.

The improved sealing of the oil control rings and piston rings also reduces oil consumption and blow-by past the piston rings. As a result, the engine will perform optimally, use less oil and deliver more power.

Although Engine Oil Plus has a slightly higher viscosity than the most commonly used engine oils (5W-30 or 0W-30), in the recommended mixing ratio it will contribute to an optimal long-term oil viscosity and reduce the aging process or "thickening" of the oil towards the end of its life.

- Improves viscosity of the engine oil and restores elasticity of the rubber seals.
- Reduces oil consumption and exhaust smoke.
- Reduces engine noise and optimizes performance.
- Applicable for petrol, LPG and diesel engines with or without turbo.
- Not harmful to soot filters and catalytic converters.
