

Timber Construct 2-Component Mounting Adhesive

Art.: 07.1471.9999

Twin cartridge 50 ml

Timber Construct is a fast and extremely powerful 2-component mounting adhesive for almost all types of wood.

Timber Construct is non-effervescent, waterproof, can be cut, milled, sanded and painted over and has a good filling capacity, which is a big plus for custom work. Thanks to the gel structure and good stability, Timber Construct is also perfectly suited for vertical bonding. Due to the fast drying time, the assembled work only needs to be clamped or supported for a short time.

All these properties make Timber Construct particularly suitable for structural bonding and all types of assembly work in the wood industry.

Timber Construct is easy to use and can be dosed very accurately thanks to the handy dual cartridge and the use of the Mixer Gun. The special mixer nozzle ensures the right mixture at all times. By not removing it after use, but only replacing it at the next use, hardening of the remaining product in the cartridge can be prevented. This means that an opened cartridge can still be used for a long time.

- Fast curing 2K wood glue, so limited clamping time.
- Extremely high tensile strength.
- Highest achievable water resistance (class D4 according to EN 204).
- Excellent adhesion to almost all types of wood and woodfibre based panel materials.
- Does not harden in the cartridge (unlike traditional effervescent glues).
- Can be perfectly cut, milled, sanded, and painted over with ISO PRIM (after curing).
- Semi-transparent, so that the glue seams take on the colour of the glued wood.
- Excellent filling, even with mismatching parts.
- Unique gel structure (does not shrink or foam).
- Almost free from harmful isocyanates, no GHS08 symbol.
- Handy dual cartridge with mixer nozzle.
