

Versa Tape 5 mm

Art.: 01.1342.0000

Roll 20 m

Versa Tape is a very easy-to-use sealant on a roll. Versa Tape can be used for fast and simple, but long-lasting sealing jobs.

The product is perfectly suited to sealing jobs subject to expansion and temperature fluctuations. Due to its enormous flexibility Versa Tape does not tear or crack.

Versa Tape is extremely well suited to the simple sealing of cable freeways, preventing dirt and dampness from getting in. In addition, the product can be used to seal switch and operating boxes on tailboards, for example, or cranes, or for sealing cable distribution boxes. The cables and switches in these boxes are extremely sensitive to moisture. Both the lid and the cable entry point must be well sealed to prevent unnecessary faults. Not only does Versa Tape prevent dampness from penetrating, it is also very easy to remove, in case the box should be opened. It can also be used to fix cables when building in equipment.

Versa Tape is self-adhesive, which makes it easy to apply, even in places which are difficult to access. The product is resistant to temperatures of -40°C to +90°C.

Versa Tape is available on rolls in the widths of 5 and 12 mm. This means that the right size is available for most common applications.

Applications:

- Cabling
- Cable entry points
- Prevents number plates from rattling
- ...
