

## PRODUCT INFO

# Cavity Wax

Art.: 02.2120.6100

Aerosol can 500 ml

Cavity Wax is a very durable, transparent, silicone-free, self-healing, not fully curing bodywork protection with excellent creep properties. As a result, during application, the product will flow into all (folded) seams of cavities and flatter surfaces, leaving an optimum preservative and rust-preventing wax layer. Thanks to the addition of a UV indicator, the presence of Cavity Wax can always be checked.

Due to its special chemical composition, Cavity Wax has an extremely high temperature resistance up to 150°C, which prevents it from dripping.

Cavity Wax is used during the construction or repair of vehicles to protect metal and sheet metal against corrosion. It is often applied to the inside of doors, chassis beams, body parts, etc.

- Very good flow qualities during application.
- No dripping after application.
- Perfect protection against corrosion.
- Aromatic/silicone free, almost odourless.
- Temperature resistant up to +150°C.
- Highly resistant to brake fluid and salt.
- Does not affect plastic & rubber parts.
- Contains a UV indicator.
