

# Pro Bond 2-Component Adhesive

Art.: 01.0638.6100

Twin cartridge 10 g

Pro Bond is a unique 2K cyanoacrylate adhesive: extremely strong, semi-transparent and permanently flexible due to the addition of a special additive. The adhesive turns violet during mixing and becomes semi-transparent as it cures. Specially developed for hard-to-bond materials. Highly moisture-resistant and suitable for thin adhesive layers.

Pro Bond has been developed for bonding a wide range of (recycled) materials. The product is odourless, free from hazard symbols, and provides excellent adhesion to various substrates, including (low-energy) plastics, rubber, polycarbonate, metal, wood, ceramics, and more. Thanks to the controlled drying, an optimal, slightly flexible bond is formed.

The application time is approximately 5–6 minutes, allowing for multiple, very precise bonds using just one [Mixer Tip](#). Its gel-like consistency also makes Pro Bond ideal for vertical applications (brief support required after bonding).

- Extremely strong adhesion on a wide variety of substrates.
- Permanently flexible and shock-resistant.
- Semi-transparent gel for an almost invisible result.
- Excellent stability and controlled curing.
- Gap-filling up to approximately 3 mm.
- Very precise application with the handy Mixer Tip.
- Multiple applications possible with one single Mixer Tip.
